

XactCommerce™ adapts to meet your online business needs.

XactCommerce was designed to provide web based business solutions. Originally designed as a project-oriented, web-based accounting system, it has grown to include functionality that can be easily customized to meet a variety of business applications. Written in Java, XactCommerce can be deployed on virtually any system, however, because of security and ease of maintenance, Linux or Mac OSX are preferred hosting environments. The XactScript language, based on the XML standard, allows for fast and easy customization of existing core logic.

XactCommerce E-Business Applications (V 3.0 - being converted to V 4.0 at this time)

- Worldwide orders for software packages & licenses
- Computer hardware store with customer ordering interface
- Contact management with integrated procedures and notes
- Digital asset management (for design and distributions companies)
